Subject: RE: CES Analytical Data Update

Gary,
Here is additional data for CES.
SDG 53874 – VB 281842, VB 641, VB 633, complete level 2.
SDG 54039 – FT 1002, complete level 2.
SDG 53937 – FT 1001, preliminary level 2. Please note, I am labeling this data set preliminary because the sample has 2 sulfide results reported. I have a message into the lab to report the correct result and revise the report.
I am expecting more data today. Anything additional received today will either be sent late this evening or sometime tomorrow.
Thanks,
Kristie

Subject: CES Analytical Data Update

Gary,
Please see the attached data that was received yesterday afternoon. I have included a summary of the files attached.
SDG 53867 – VB 607 level 2 report with total analyses
SDG 53933 – VB 639 and VB 618, partial prelims on all total and TCLP analyses with the following exception – VB 618 total VOCs.
SDG 54040 – South Containment, FT 506, and FT 1004 – partial prelims on all total and TCLP analyses with the following exception – FT 506 and FT 1004 total herbicides.
Please note, in SDG 54040, sample FT 1004 will not have total cyanide results. The lab indicated that they made numerous attempts with this analysis. With each attempt (using various sample aliquot sizes), the sample “pops from the tube upon sample prep”. We asked what scenario would cause this type of reaction. The analyst indicated the sample could likely be a solvent. I will ask the lab to narrate this sample/analysis in the case narrative.
Please let me know if you have any questions.

Kristie
